Variety	Size	Hardiness	Description	Culture	Use
Asimina triloba (Paw Paw)	H: 15-20' W: 30-40'	Zones 5-8	Largest native fruit in North America. Best fruit in full sun. Small trees that grow 15-20' in Height and 30-40' in width. Plant several 10-20' apart for fruiting. More than one variety needed for fruit. Can take a few years to get established before fruiting.	Full sun to shade; moist, fertile, deep, acidic soil. Under story tree in the wild.	Edible fruits, naturalizing, woodland edges.
Ficus carica (Fig)					
'Brown Turkey'	H: 15-25' W: 15-25'	Zones 6-9	A hardier version that fruits on new wood. Cold winters will kill to the ground, but will grow substantially in one season and produce fruit.	Full sun is best for fruiting.	It takes a while to leaf out in spring. Give it some time.
'Chicago Hardy'	H: 10-15' W: 9-12'	Zones 6-9	Self-pollinating, producing several sweet figs.	Full sun is best for fruiting.	It takes a while to leaf out in spring. Give it some time.
Apple Trees					
Golden Delicious	15-20'	Zone 4-9	Sweet tasting, crisp apple	Ripens mid-Sept	Edible fruits
Newtown Pippin	10-30'	Zone 3-9	Large tree producing yellow green fruit		Edible fruits
Red Delicious	12-15'	Zone 4-9	Large snacking apple with bright red skin	Ripens late season	Edible fruits
Cherry Trees					
Montmorency	16-19'	Zone 4	Large red fruit with great flavor	Ripe in July	Edible fruits
Peach Trees					
Cresthaven	15-15'	Zones 5-8	Tree produces delicious peaches	Ripe in August	Edible fruits
Pear Trees					
Kieffer	20'	Zones 4-9	White flesh, yellow skin juicy pears	Late Sept/Oct	Edible Fruits
Other Trees					
Persimmon	30-50'	Zones 4-9	Pyramidal or oval, dark green leaves,		Edible fruits
